

✓ Epsilon-Greedy Policy Visualization

```
import numpy as np
import matplotlib.pyplot as plt
```

```
epsilon = 0.2      # 20% exploration
steps = 1000       # Total decisions
```

```
exploration = []
exploitation = []

explore_count = 0
exploit_count = 0
```

```
for step in range(steps):

    random_value = np.random.rand()

    # Exploration
    if random_value < epsilon:
        explore_count += 1

    # Exploitation
    else:
        exploit_count += 1

    exploration.append(explore_count)
    exploitation.append(exploit_count)
```

```
plt.figure(figsize=(10,5))

plt.plot(exploration, label='Exploration', color='orange')
plt.plot(exploitation, label='Exploitation', color='blue')

plt.title('Epsilon-Greedy Policy Visualization')
plt.xlabel('Steps')
plt.ylabel('Count')

plt.legend()
plt.grid(True)

plt.show()
```
